**FROM:** Elizabeth Hoover, Ph.D., Chief Technology Officer

**THROUGH:** *(initials)* Dr. Alvin Crawley, Superintendent of Schools

**TO:** The Honorable Karen Graf, Chair, and Members of the Alexandria City School Board

**TOPIC:** Amplify Tablet System Status

## **BACKGROUND**

Amplify has notified ACPS that they are no longer investing in new tablets or upgrades to their system. Although they will continue to support current clients, they have halted previously planned updates to the operating and management software. In addition, they will no longer invest in student and teacher requested enhancements.

## **IMPACT**

Technology Services and TC administration are concerned about investing valuable professional development time in a product that will be discontinued in the following school year. In addition, a critical software update that was planned for this summer now has been canceled. This update was essential for new applications anticipated by teachers and for applying technical solutions for device management.

As part of the Amplify implementation, teachers and students were provided Google for Education accounts. As a result, this establishes some foundation for ACPS to select a Google device to replace the Amplify tablet. In addition, many of the instructional applications used on the tablet would be available on a Google device.

Although it is an aggressive timeline, through multiple meetings with Technology Services, Dr. Dingle, Mr. Mann and TC staff, consensus has been reached that moving to another device for the 2015-2016 school year would be the best option. A timeline has been attached that includes additional student and teacher input in the device selection, student training and teacher professional development.

Changes made to Google devices and Google Classroom in the last year would provide students and teachers a similar customized environment that was provided through the Amplify tablet.

Amplify has agreed to release ACPS from the lease at no additional cost. The tablets that were originally purchased for the pilot can remain at Polk, Tucker and Douglas MacArthur. Given the smaller scale of implementation, professional development needs and difference in technical requirements between elementary and high school students, Technology Services and elementary staff agree on this course of action.

Through the summer staff will work with the five elementary schools selected for the expansion of the Amplify pilot to determine next steps.
